

## **ENVIRONMENTAL POLICY**

As an Electrical Appliance Testing Company, we have a limited manufacturing process where we do not deal significantly with hazardous substances but we are responsive to current concerns about the environment and are aware that such issues are likely to become even more important in the future. The environmental debate is a complex matter with conflicting interests but we are pledged to: -

- ◆ Comply with current legislation on environmental matters.
- ◆ Keep employees well informed not only of company policy but of specific requirements and items of concern.
- ◆ Be responsible for waste management with particular emphasis on the safe disposal of materials.
- ◆ Make efforts to reuse materials before disposing or recycling.
- ◆ Use recycled and environmentally friendly products so far as is practicable.
- ◆ Minimize the efforts of polluting substances – including the use of lead free fuels.
- ◆ Make aware of light pollution – particularly skyglow and its unwanted ingress into adjacent areas.
- ◆ Conserve energy in our premises and our vehicles with “net energy use” the overriding consideration.
- ◆ Alertness to new legislation and to the general environmental debate.
- ◆ In environmental matters, as in all company business, we are committed to continuous improvement through vigilance and prompt action.

Signed:

STEVE DUGDALE  
MANAGING DIRECTOR
